Lemur user-update path stores plaintext passwords

Report Type: Weekly · Generated: June 25, 2026 22:15 UTC · Coverage: Jun 25 - Jun 25, 2026

1 Total Advisories	0 Critical	0 High	1 Medium
MEDIUM Severity	4.9 CVSS / Risk Score	TLP:CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Summary `lemur.users.service.update()` writes a user's new password as plaintext to the `users.password` column. The `User` model wires bcrypt hashing to SQLAlchemy's `before_insert` event but registers no equivalent listener for `before_update`, and `service.update()` does not call `user.hash_password()` after assigning the new value. Every password change performed through the admin-gated `PUT /api/1/users/<id>` endpoint persists the user's password to the database in cleartext. ## Root Cause `lemur/users/models.py`: ```python # line 38 class User(BaseModel): __tablename__ = "users" id = Column(Integer, primary_key=True) password = Column(String(128)) # plain column, no setter, no Vault descriptor # line 74 def hash_password(self): if self.password: self.password = bcrypt.generate_password_hash(self.password).decode("utf-8") # line 111 listen(User, "before_insert", hash_password) # only before_insert is wired ``` `lemur/users/

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intel/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield Lemur user instances exposed to the internet.
3. Enable verbose access logging on all Lemur user endpoints immediately.
4. Pull last 72h of web server and application logs for forensic baselining.

CYBERDUDEBIVASH® SENTINEL APEX // CONFIDENTIAL - FOR AUTHORIZED USE ONLY

5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

1. Apply vendor patch for Lemur user or implement recommended mitigation.
2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
3. Rotate all API keys, service account credentials, and session tokens.
4. Conduct forensic timeline reconstruction for potential compromise window.
5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

1. Conduct post-incident review and update incident response runbooks.
2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
3. Update asset inventory with patched version information and closure evidence.
4. Submit findings to internal risk register and CISO dashboard.
5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

$150K - $900K	$380K	$120K/day	$85K
Breach Cost Range (FAIR)	IBM Cost of Breach 2025 Median	Business Interruption Cost	Regulatory Fine Exposure

Medium severity events require internal investigation and targeted customer notification. Average cost includes 340 hours of engineering time.

Remediation Cost Estimate: $55K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
PCI-DSS v4.0	Req. 6.3.3	Non-critical patches applied within 3 months
NIST CSF 2.0	ID.RA / PR.PS	Vulnerability assessment and platform security policies
ISO 27001:2022	A.8.8	Vulnerability management programme with documented remediation timelines

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Monitor Lemur user-update path stores plaintext passwords for escalation.
2. Apply patches in next maintenance window.
3. Apply vendor patch for Lemur user-update path stores plaintext passwords immediately - check NVD for official fix guidance.
4. Enable enhanced logging and alerting on all systems running affected software versions.
5. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
6. Audit all internet-facing instances of affected products and confirm patch deployment.
7. Conduct a threat hunt using MITRE ATT&CK techniques mapped in this advisory.
