## Executive Summary

### Summary The `nebula-mgmt` Web UI host-creation path ignores both the server-wide `enrollment\_token\_ttl` security setting and per-network `network\_config.enrollment\_token\_ttl` overrides. API host creation and token-regeneration paths use the configured TTL resolver, but `POST /ui/hosts` hardcodes `now.Add(24 \* time.Hour)` for newly minted agent enrollment tokens. In deployments that intentionally reduce enrollment-token lifetime, any authenticated operator who can create a host through the Web UI can still mint a bearer enrollment token valid for about 24 hours. ### Details Enrollment tokens are bearer credentials for the public `POST /api/v1/enroll` endpoint: possession of a valid token allows enrolling the pending host and receiving a signed Nebula certificate/config for that host. The server configuration documents a security knob for their default lifetime and per-network overrides: - `internal/config/server.go:82` defines `EnrollmentTokenTTL` as the default lifetime for fresh

### MITRE ATT&CK® v15 Mapping

Technique density score: 0.0 · Techniques observed: 0 · Tactics covered: 0

MITRE ATT&CK techniques pending analyst enrichment. Deploy detection rules from Section 6 to identify related activity.

### Threat Actor Intelligence

Attribution analysis across advisories in this report period.

| Threat Actor   | Count | Associated CVEs / Indicators |
|----------------|-------|------------------------------|
| CDB-UNATTR-CVE | 1     | -                            |

### Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intell/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

## Detection Engineering

Deploy these production-ready detection rules into your SIEM platform to identify exploitation attempts in real time. Compatible with Microsoft Sentinel, Splunk ES, and any Sigma-compatible platform.

## Incident Response Playbook

### Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield nebula instances exposed to the internet.
3. Enable verbose access logging on all nebula endpoints immediately.

- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for nebula or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

|                                                    |                                                 |                                                 |                                          |
|----------------------------------------------------|-------------------------------------------------|-------------------------------------------------|------------------------------------------|
| <b>\$150K - \$900K</b><br>Breach Cost Range (FAIR) | <b>\$380K</b><br>IBM Cost of Breach 2025 Median | <b>\$120K/day</b><br>Business Interruption Cost | <b>\$85K</b><br>Regulatory Fine Exposure |
|----------------------------------------------------|-------------------------------------------------|-------------------------------------------------|------------------------------------------|

Medium severity events require internal investigation and targeted customer notification. Average cost includes 340 hours of engineering time.

**Remediation Cost Estimate:** \$55K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

| Framework      | Reference     | Obligation                                                               |
|----------------|---------------|--------------------------------------------------------------------------|
| PCI-DSS v4.0   | Req. 6.3.3    | Non-critical patches applied within 3 months                             |
| NIST CSF 2.0   | ID.RA / PR.PS | Vulnerability assessment and platform security policies                  |
| ISO 27001:2022 | A.8.8         | Vulnerability management programme with documented remediation timelines |

## Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Monitor nebula-mesh: Web UI host creation ignores configured enrollment token TTL and mints 24-hour bearer enrollment tokens for escalation.
2. Apply patches in next maintenance window.
3. Apply vendor patch for nebula-mesh: Web UI host creation ignores configured enrollment token TTL and mints 24-hour bearer enrollment tokens immediately - check NVD for official fix guidance.
4. Enable enhanced logging and alerting on all systems running affected software versions.
5. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
6. Audit all internet-facing instances of affected products and confirm patch deployment.
7. Conduct a threat hunt using MITRE ATT&CK techniques mapped in this advisory.
