

IBM WebSphere Server Vulnerable to Remote Code Execution Attack Via Crafted Request

Report Type: Weekly · Generated: June 01, 2026 18:26 UTC · Coverage: Jun 01 – Jun 01, 2026

1 Total Advisories	0 Critical	0 High	0 Medium
LOW Severity	N/A CVSS / Risk Score	TLP:RED TLP Classification	PRO Customer Tier

Executive Summary

[P3] Remote Code Execution - low severity (Risk 2.52/10). EPSS 0.26% exploitation probability (30-day forecast). MITRE ATT&CK mapped: T1059, T1190 (2 techniques). 3 indicators detected - upgrade to Pro for full IOC access. Actor attribution: CDB-TA-02. AI confidence: LOW (33%) - limited source data available.

CONFIDENTIALITY NOTICE: This report is classified PRO tier and intended exclusively for the named recipient. Redistribution, resale, or disclosure to unauthorized parties is strictly prohibited. © 2026 CYBERDUDEBIVASH SENTINEL APEX. All rights reserved.

Top Threat Advisories

High-priority advisories ranked by CVSS score, exploitability, and actor attribution.

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intel/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Detection Engineering

Deploy these production-ready detection rules into your SIEM platform to identify exploitation attempts in real time. Compatible with Microsoft Sentinel, Splunk ES, and any Sigma-compatible platform.

Sigma Rule — Webserver / Process Monitoring

```
title: SENTINEL APEX – CDB-ADVISORY Exploitation Attempt
id: cdb-cdb-advisory-det
status: experimental
description: Detects exploitation indicators related to CDB-ADVISORY.

Incident Response Playbook

Phase 1 — 0–24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield IBM WebSphere Server Vulnerable to Remote Code Execution Attack Via Crafted Request instances exposed to the internet.

- 3. Enable verbose access logging on all IBM WebSphere Server Vulnerable to Remote Code Execution Attack Via Crafted Request endpoints immediately.
- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 — 24–72 Hours (Eradication)

- 1. Apply vendor patch for IBM WebSphere Server Vulnerable to Remote Code Execution Attack Via Crafted Request or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 — 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

\$20K — \$180K Breach Cost Range (FAIR)	\$60K IBM Cost of Breach 2025 Median	\$25K/day Business Interruption Cost	N/A Regulatory Fine Exposure
---	--	--	--

Low severity findings require targeted patches. Aggregated low-severity debt compounds to medium breach probability within 12 months.

Remediation Cost Estimate: \$15K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
ISO 27001:2022	A.8.8	Track and remediate within standard 90-day patch cycle

Framework	Reference	Obligation
NIST CSF 2.0	ID.RA	Include in regular vulnerability risk assessment

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Monitor IBM WebSphere Server Vulnerable to Remote Code Execution Attack Via Crafted Request for escalation.
2. Apply patches in next maintenance window.
3. Apply vendor patch for IBM WebSphere Server Vulnerable to Remote Code Execution Attack Via Crafted Request immediately — check NVD for official fix guidance.
4. Enable enhanced logging and alerting on all systems running affected software versions.
5. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
6. Audit all internet-facing instances of affected products and confirm patch deployment.
7. Conduct a threat hunt using MITRE ATT&CK techniques mapped in this advisory.
