Executive Summary

Summary Attachment passwords are hashed using SHA-1, a cryptographically broken algorithm. SHA-1 has been vulnerable to collision attacks since 2017 (SHAttered). ### Details **Affected File** : `phpmyfaq/src/phpMyFAQ/Attachment/AbstractAttachment.php` ### Impact - An attacker can generate SHA-1 collisions to bypass attachment protection - Risk of password cracking if database is compromised - Estimated cracking time: < 1 minute for standard attachment ### Solution **Use bcrypt:**` public function setPassword(string \$password): void { \$this->passwordHash = password\_hash(\$password, PASSWORD\_BCRYPT); } public function verifyPassword(string \$plainPassword): bool { return password\_verify(\$plainPassword, \$this->passwordHash); }`
