Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield Pillow: Out instances exposed to the internet.
3. Enable verbose access logging on all Pillow: Out endpoints immediately.
4. Pull last 72h of web server and application logs for forensic baselining.
5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

1. Apply vendor patch for Pillow: Out or implement recommended mitigation.
2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
3. Rotate all API keys, service account credentials, and session tokens.
4. Conduct forensic timeline reconstruction for potential compromise window.
5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

1. Conduct post-incident review and update incident response runbooks.
2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
3. Update asset inventory with patched version information and closure evidence.
4. Submit findings to internal risk register and CISO dashboard.
5. Schedule follow-up vulnerability scan to confirm remediation completeness.
