Executive Summary

The GHSA-48qw-824m-86pr hardening added a `checkPermissionsOnDatabase(UPDATE_SECURITY)` gate on the polyglot engine (`PolyglotQueryEngine.java:112-114,126,176,199`), but only there. The SQL route to JavaScript never touches it: `DefineFunctionStatement.executeSimple` (`DefineFunctionStatement.java:37-100`), `LocalSchema.registerFunctionLibrary`, and `SQLQueryEngine` library-function invocation (`SQLQueryEngine.java:198-224`) do no scripting-permission check. Exploit: any user authorized for the DB (including a read-only role) runs `POST /api/v1/command/<db> {"language":"sql","command":"DEFINE FUNCTION x.run \"<js>\" LANGUAGE js"}` then `SELECT x.run()`, executing arbitrary JavaScript and defeating the control meant to restrict scripting to security admins. On this path `allowedPackages` is empty so `Java.type` host lookup and reflection are blocked, but `IOAccess.ALL` still permits `load(url)` SSRF/remote-JS inclusion and unbounded CPU/memory DoS. Fix: gate `DefineFunctionStatement.executeSimple`, the `SQLQueryE`

Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield ArcadeDB: Scripting authorization gate (GHSA instances exposed to the internet.
3. Enable verbose access logging on all ArcadeDB: Scripting authorization gate (GHSA endpoints immediately.

- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for ArcadeDB: Scripting authorization gate (GHSA or implement recommended mitigation).
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.
