

EGroupware Vulnerable to Local File Inclusion via file:// URI in Mail Compose

Report Type: Weekly · Generated: July 07, 2026 14:30 UTC · Coverage: Jul 07 - Jul 07, 2026

1 Total Advisories	0 Critical	0 High	1 Medium
MEDIUM Severity	6.5 CVSS / Risk Score	TLP:CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Summary The function processes image URLs embedded in an HTML email body without validating or restricting URI schemes. The check `!str\_starts\_with(\$myUrl, 'http')` evaluates to true for `file://` URIs, causing `file\_get\_contents(\$basedir . urldecode(\$myUrl))` to read arbitrary files from the server filesystem and embed them as inline MIME attachments in outgoing email.

```
str_starts_with('file:///etc/passwd', 'http') → **false** !false → **true** ```php // api/src/Mail.php foreach($images[2] as $i => $url) { // $isData = false; $basedir = $data = ""; $needTempFile = true; $attachmentData = ['name' => "", 'type' => "", 'file' => "", 'tmp_name' => ""]; try { // do not change urls for absolute images (thanks to corvuscorax) if (!str_starts_with($url, 'data:')) { $attachmentData['name'] = basename($url); // need to resolve all sort of url if (($directory = dirname($url)) == '.') $directory = ""; $ext = pathinfo($attachmentDa
```

Top Threat Advisories

High-priority advisories ranked by CVSS score, exploitability, and actor attribution.

Advisory Title	Severity	CVSS	EPSS	AI Summary
EGroupware Vulnerable to Local File Inclusion via file upload in Mail	MEDIUM	6.5	-	### Summary The function processes image URLs embedded in an HTML email

MITRE ATT&CK® v15 Mapping

Technique density score: 0.0 · Techniques observed: 0 · Tactics covered: 0

MITRE ATT&CK techniques pending analyst enrichment. Deploy detection rules from Section 6 to identify related activity.

Threat Actor Intelligence

Attribution analysis across advisories in this report period.

Threat Actor	Count	Associated CVEs / Indicators
CDB-UNATTR-CVE	1	-

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: GET /api/v1/intell/iocs?advisory={id}. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Detection Engineering

Deploy these production-ready detection rules into your SIEM platform to identify exploitation attempts in real time. Compatible with Microsoft Sentinel, Splunk ES, and any Sigma-compatible platform.

Sigma Rule - Webserver / Process Monitoring

```
title: SENTINEL APEX - CDB-ADVISORY Exploitation Attempt

Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield EGroupware Vulnerable to Local File Inclusion via file:// URI in Mail Compose instances exposed to the internet.

- 3. Enable verbose access logging on all EGroupware Vulnerable to Local File Inclusion via file:// URI in Mail Compose endpoints immediately.
- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for EGroupware Vulnerable to Local File Inclusion via file:// URI in Mail Compose or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

\$150K - \$900K Breach Cost Range (FAIR)	\$380K IBM Cost of Breach 2025 Median	\$120K/day Business Interruption Cost	\$85K Regulatory Fine Exposure
--	---	---	--

Medium severity events require internal investigation and targeted customer notification. Average cost includes 340 hours of engineering time.

Remediation Cost Estimate: \$55K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
PCI-DSS v4.0	Req. 6.3.3	Non-critical patches applied within 3 months

Framework	Reference	Obligation
NIST CSF 2.0	ID.RA / PR.PS	Vulnerability assessment and platform security policies
ISO 27001:2022	A.8.8	Vulnerability management programme with documented remediation timelines

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Monitor EGroupware Vulnerable to Local File Inclusion via file:// URI in Mail Compose for escalation.
2. Apply patches in next maintenance window.
3. Apply vendor patch for EGroupware Vulnerable to Local File Inclusion via file:// URI in Mail Compose immediately - check NVD for official fix guidance.
4. Enable enhanced logging and alerting on all systems running affected software versions.
5. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
6. Audit all internet-facing instances of affected products and confirm patch deployment.
7. Conduct a threat hunt using MITRE ATT&CK techniques mapped in this advisory.
