CRITICAL Severity	9.8 CVSS / Risk Score	TLP: CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Summary CVE-2026-44338 (GHSA-6rmh-7xcm-cpxj) documents that PraisonAI ships a code-generator (`praisonai.deploy.api.generate_api_server_code`) that emits a Flask API server with authentication disabled by default. Users who follow the documented quickstart (`praisonai deploy --type api`) get a server that: - binds to `0.0.0.0` per the recommended sample YAML - exposes `/chat` and `/agents` endpoints - runs `praisonai.run()` on user-supplied JSON input — LLM orchestration with the API key materials present in the process environment - does not require any authentication The PyPI wheel `praisonai==4.6.33` (current `@latest`) still ships the generator with `auth_enabled` defaulting to `False`. The fix shape is opt-in via `APIConfig(auth_enabled=True, auth_token=...)`. ### Details **Anchor (file:line:symbol)** - Vulnerable artifact: `praisonai==4.6.33` on PyPI. - Defaults: `praisonai/deploy/models.py:29` — `auth_enabled: bool = Field(default=False, ...)`; `praisonai/deploy/models`

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intel/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Detection Engineering

Deploy these production-ready detection rules into your SIEM platform to identify exploitation attempts in real time. Compatible with Microsoft Sentinel, Splunk ES, and any Sigma-compatible platform.

Incident Response Playbook

Phase 1 — 0–24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield PraisonAI `deploy` instances exposed to the internet.
3. Enable verbose access logging on all PraisonAI `deploy` endpoints immediately.
4. Pull last 72h of web server and application logs for forensic baselining.

- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 — 24–72 Hours (Eradication)

- 1. Apply vendor patch for PraisonAI `deploy or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 — 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

\$2.4M — \$12M Breach Cost Range (FAIR)	\$5.8M IBM Cost of Breach 2025 Median	\$1.2M/day Business Interruption Cost	\$850K Regulatory Fine Exposure
---	---	---	---

Critical severity breaches trigger mandatory 72-hour regulatory disclosure (GDPR Art. 33), class-action exposure, and long-tail legal costs averaging 18–36 months post-incident.

Remediation Cost Estimate: \$380K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
GDPR	Art. 33 / Art. 83(4)	72-hour breach notification to DPA; fines up to 4% of global annual turnover
PCI-DSS v4.0	Req. 6.3 / 6.4	Critical patches within 1 month; compensating controls required
NIS2 Directive	Art. 23	Early warning within 24h; full incident report within 72h
SOX / ICFR	Section 302 / 404	Material cybersecurity weakness disclosure in 10-K/10-Q

Framework	Reference	Obligation
ISO 27001:2022	A.8.8 / A.5.29	Documented vulnerability management and incident management

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Apply patches immediately for PraisonAI `deploy --type api` emits a Flask server with authentication disabled by default.
2. Enable enhanced monitoring for related IOCs.
3. Review SIEM rules for associated MITRE ATT&CK techniques.
4. Apply vendor patch for PraisonAI `deploy --type api` emits a Flask server with authentication disabled by default immediately — check NVD for official fix guidance.
5. Enable enhanced logging and alerting on all systems running affected software versions.
6. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
7. Audit all internet-facing instances of affected products and confirm patch deployment.
