Executive Summary

Missing Authorization in API CategoryController — CVE-2026-24421 fixed BackupController by adding userHasPermission(PermissionType::BACKUP). The same fix was NOT applied to 4 other write endpoints in the public API. All 4 only call isValidToken() (shared API key) but never call userHasPermission(), allowing any API token holder to perform admin operations regardless of their user permissions. ## Summary CVE-2026-24421 fixed BackupController by adding: \$this->userHasPermission(PermissionType::BACKUP); The same fix was NOT applied to 4 other write endpoints in the public API. All 4 only call \$this->isValidToken() — which checks a shared API key header, NOT the individual user's role permissions. ## Affected Endpoints 1. src/phpMyFAQ/Controller/Api/CategoryController.php → create() POST /api/v4.0/category Missing: userHasPermission(PermissionType::CATEGORY_ADD) Any API token holder can create categories regardless of user role. 2. src/phpMyFAQ/Controller/Api/FaqController.php →
