

Pillow `BdfFontFile`: `Image.new()` called without `\_decompression\_bomb\_check()` — bomb protection bypass via font loading

Report Type: Weekly · Generated: July 20, 2026 21:27 UTC · Coverage: Jul 20 - Jul 20, 2026

1 Total Advisories	0 Critical	1 High	0 Medium
HIGH Severity	7.5 CVSS / Risk Score	TLP:CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Summary `PIL/BdfFontFile.py` `bdf\_char()` (lines 84–88) reads the `BBX width height` field from a BDF font file and passes the dimensions directly to `Image.new()` without calling `Image.\_decompression\_bomb\_check()`. This completely bypasses Pillow's documented decompression bomb protection. `Image.open()` enforces `MAX\_IMAGE\_PIXELS = 89,478,485` and raises `DecompressionBombError` for images exceeding $2 \times \text{MAX} = 178,956,970$ pixels. The BDF font loading path calls `Image.new()` directly, which only calls `\_check\_size()` (validates ≥ 0) — no pixel count limit. **Vulnerable code** (`PIL/BdfFontFile.py` lines 84–88):
```python # width, height from attacker-controlled "BBX width height x y" line try: im = Image.frombytes("1", (width, height), bitmap, "hex", "1") except ValueError: # TRIGGERED when BITMAP section is empty (zero hex lines) im = Image.new("1", (width, height)) # ← NO \_decompression\_bomb\_check()! # ^ This image is stored in self.glyph[ch] — persists

MITRE ATT&CK® v15 Mapping

Technique density score: 0.0 · Techniques observed: 0 · Tactics covered: 0

MITRE ATT&CK techniques pending analyst enrichment. Deploy detection rules from Section 6 to identify related activity.

Threat Actor Intelligence

Attribution analysis across advisories in this report period.

| Threat Actor   | Count | Associated CVEs / Indicators |
|----------------|-------|------------------------------|
| CDB-UNATTR-CVE | 1     | -                            |

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intel/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

## Detection Engineering

Deploy these production-ready detection rules into your SIEM platform to identify exploitation attempts in real time. Compatible with Microsoft Sentinel, Splunk ES, and any Sigma-compatible platform.

## Incident Response Playbook

### Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield Pillow `BdfFontFile`: `Image.new()` called without `\_decompression\_bomb\_check()` — bomb protection bypass via font loading instances exposed to the internet.

- 3. Enable verbose access logging on all Pillow ``BdfFontFile``: ``Image.new()`` called without ``_decompression_bomb_check()`` — bomb protection bypass via font loading endpoints immediately.
- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for Pillow ``BdfFontFile``: ``Image.new()`` called without ``_decompression_bomb_check()`` — bomb protection bypass via font loading or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

|                                                                       |                                                                    |                                                                    |                                                              |
|-----------------------------------------------------------------------|--------------------------------------------------------------------|--------------------------------------------------------------------|--------------------------------------------------------------|
| <div><b>\$800K - \$4.5M</b></div> <div>Breach Cost Range (FAIR)</div> | <div><b>\$1.8M</b></div> <div>IBM Cost of Breach 2025 Median</div> | <div><b>\$450K/day</b></div> <div>Business Interruption Cost</div> | <div><b>\$320K</b></div> <div>Regulatory Fine Exposure</div> |
|-----------------------------------------------------------------------|--------------------------------------------------------------------|--------------------------------------------------------------------|--------------------------------------------------------------|

High severity incidents activate IR retainers, forensic investigation (avg 47 days), and reputational damage impacting 12-18% of revenue.

**Remediation Cost Estimate:** \$180K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

| Framework | Reference         | Obligation                                                           |
|-----------|-------------------|----------------------------------------------------------------------|
| GDPR      | Art. 32 / Art. 33 | Appropriate technical measures; notify DPA if personal data affected |

| Framework      | Reference     | Obligation                                                         |
|----------------|---------------|--------------------------------------------------------------------|
| PCI-DSS v4.0   | Req. 6.3.3    | Patches within 1 month; documented risk acceptance if deferred     |
| NIS2 Directive | Art. 21       | Risk management measures including vulnerability handling policies |
| NIST CSF 2.0   | RS.MI / RC.RP | Incident mitigation and recovery planning; post-incident review    |

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Apply patches immediately for Pillow ``BdfFontFile`: `Image.new()`` called without ``_decompression_bomb_check()`` — bomb protection bypass via font loading.
2. Enable enhanced monitoring for related IOCs.
3. Review SIEM rules for associated MITRE ATT&CK techniques.
4. Apply vendor patch for Pillow ``BdfFontFile`: `Image.new()`` called without ``_decompression_bomb_check()`` — bomb protection bypass via font loading immediately - check NVD for official fix guidance.
5. Enable enhanced logging and alerting on all systems running affected software versions.
6. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
7. Audit all internet-facing instances of affected products and confirm patch deployment.
