

Pillow: `FontFile.compile()`: `Image.new()` called without `\_decompression\_bomb\_check()`

Report Type: Weekly · Generated: July 20, 2026 21:27 UTC · Coverage: Jul 20 - Jul 20, 2026

1 Total Advisories	0 Critical	1 High	0 Medium
HIGH Severity	7.5 CVSS / Risk Score	TLP:CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Description `PIL/FontFile.py` `FontFile.compile()` assembles per-glyph images into a single combined bitmap using `Image.new("1", (xsize, ysize))` without calling `Image.\_decompression\_bomb\_check()`. This is the base-class method shared by both `BdfFontFile` and `PcfFontFile`, and it is triggered whenever a loaded font is converted to an `ImageFont` or saved. Neither `BdfFontFile.BdfFontFile(fp)` nor `PcfFontFile.PcfFontFile(fp)` is registered with `Image.register\_open()`, so Pillow's standard decompression bomb guard never fires for font objects. The compile step is the final opportunity to check the combined allocation — and it has no check. **Vulnerable code (`PIL/FontFile.py` lines ~64–92):** ``python def compile(self) -> None: if self.bitmap: return h = w = maxwidth = 0 lines = 1 for glyph in self.glyph: # up to 256 glyph slots if glyph: d, dst, src, im = glyph h = max(h, src[3] - src[1]) # max glyph h

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intell/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield Pillow: `FontFile.compile()`: `Image.new()` called without `\_decompression\_bomb\_check()` instances exposed to the internet.

- 3. Enable verbose access logging on all Pillow: ``FontFile.compile()`: `Image.new()`` called without ``_decompression_bomb_check()`` endpoints immediately.
- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for Pillow: ``FontFile.compile()`: `Image.new()`` called without ``_decompression_bomb_check()`` or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

\$800K - \$4.5M Breach Cost Range (FAIR)	\$1.8M IBM Cost of Breach 2025 Median	\$450K/day Business Interruption Cost	\$320K Regulatory Fine Exposure
---	--	--	--

High severity incidents activate IR retainers, forensic investigation (avg 47 days), and reputational damage impacting 12-18% of revenue.

Remediation Cost Estimate: \$180K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
GDPR	Art. 32 / Art. 33	Appropriate technical measures; notify DPA if personal data affected

Framework	Reference	Obligation
PCI-DSS v4.0	Req. 6.3.3	Patches within 1 month; documented risk acceptance if deferred
NIS2 Directive	Art. 21	Risk management measures including vulnerability handling policies
NIST CSF 2.0	RS.MI / RC.RP	Incident mitigation and recovery planning; post-incident review

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Apply patches immediately for Pillow: ``FontFile.compile()`: `Image.new()`` called without ``_decompression_bomb_check()`.`
2. Enable enhanced monitoring for related IOCs.
3. Review SIEM rules for associated MITRE ATT&CK techniques.
4. Apply vendor patch for Pillow: ``FontFile.compile()`: `Image.new()`` called without ``_decompression_bomb_check()`. immediately - check NVD for official fix guidance.`
5. Enable enhanced logging and alerting on all systems running affected software versions.
6. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
7. Audit all internet-facing instances of affected products and confirm patch deployment.
