Executive Summary

Summary **Type:** Insecure Direct Object Reference. Five label endpoints — `PATCH /workspaces/{workspace\_id}/labels/{label\_id}`, `DELETE .../labels/{label\_id}`, `POST .../issues/{issue\_id}/labels/{label\_id}`, `DELETE .../issues/{issue\_id}/labels/{label\_id}`, `GET .../issues/{issue\_id}/labels` — gate access on `require\_workspace\_member(workspace\_id)` only and pass URL-supplied `label\_id` and `issue\_id` straight through to `LabelService` without verifying either belongs to the workspace. **File:** `src/praisonai-platform/praisonai\_platform/services/label\_service.py`, lines 35-100; route handlers at `src/praisonai-platform/praisonai\_platform/api/routes/labels.py`, lines 42-106. **Root cause:** identical pattern to the agent / issue / project / comment IDORs in this codebase: the route's `workspace\_id` is used as a membership predicate but never threaded through to the service layer. `LabelService.get(label\_id)` runs `session.get(IssueLabel, label\_id)` with no workspace filter; `update`

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Apply patches immediately for praisonai-platform: Label endpoints' unchecked label_id/issue_id enable cross-workspace label IDOR (edit, delete, link).
2. Enable enhanced monitoring for related IOCs.
3. Review SIEM rules for associated MITRE ATT&CK; techniques.
