Executive Summary

Summary **Type:** Insecure Direct Object Reference. The `GET /workspaces/{workspace\_id}/issues/{issue\_id}/activity` endpoint is gated by `require\_workspace\_member(workspace\_id)` and dispatches to `ActivityService.list\_for\_issue(issue\_id)`, which executes `SELECT \* FROM activity WHERE issue\_id = :issue\_id` with no workspace constraint. A user who is a member of any workspace can read the full activity log of any issue across the entire multi-tenant deployment. **File:** `src/praisonai-platform/praisonai\_platform/api/routes/activity.py`, lines 32-43; `services/activity\_service.py`'s `list\_for\_issue` method. **Root cause:** the route extracts `workspace\_id` from the URL path, uses it solely for the membership gate, then passes the URL-supplied `issue\_id` directly to `ActivityService.list\_for\_issue(issue\_id)` without verifying which workspace the issue belongs to. The companion `list\_workspace\_activity` endpoint at line 19-29 is implemented correctly (it passes `workspace\_id` to `svc`.
