Executive Summary

Unauthenticated HTTP MCP Tool Execution Leaks Operator Meta Access Token | Field | Value | | ----- | ---- | | Repository | pipeboard-co/meta-ads-mcp | | Affected version | ≤ 1.0.101 (commit 496c988 ~ 7d14226); Versions 1.0.102–1.0.105 lack git tags, so patch status is unconfirmed. | | Vulnerability | CWE-287 — Improper Authentication | | Severity | Critical | | CVSS 3.1 | 9.1 (CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:N) | ## Summary `AuthInjectionMiddleware.dispatch()` at `http\_auth\_integration.py:272` unconditionally forwards unauthenticated Streamable HTTP requests to downstream MCP tool handlers without issuing a `401` response, allowing any network-reachable caller to invoke MCP tools without authentication. When no per-request credential is present, tool handlers fall back to the `META\_ACCESS\_TOKEN` environment variable, and when the downstream Meta Graph API call fails, `api.py:263–269` serialises the raw `httpx` request URL
