

aiohttp: TLS Server Hostname Override Is Ignored When Reusing HTTPS Connections

Report Type: Weekly · Generated: June 15, 2026 20:18 UTC · Coverage: Jun 15 - Jun 15, 2026

1 Total Advisories	0 Critical	0 High	0 Medium
LOW Severity	2.5 CVSS / Risk Score	TLP:CLEAR TLP Classification	PRO Customer Tier

Executive Summary

Summary The `server\_hostname` TLS SNI check can be bypassed when an existing connection is reused. ### Impact If an application makes multiple requests to the same domain, but with different per-request `server\_hostname` parameters, then the later calls may succeed by reusing the existing connection when they should have been rejected due to the TLS SNI check. ### Workaround Disable keep_alive if you need to change the `server\_hostname` check between requests. ----- Patch: <https://github.com/aio-lib/aiohttp/commit/0ca2b6c28a25726527a8b60f25960262a91ed0e0>

Top Threat Advisories

High-priority advisories ranked by CVSS score, exploitability, and actor attribution.

Advisory Title	Severity	CVSS	EPSS	AI Summary
aiohttp: TLS Server Hostname Override Is Ignored When Reusing HTTPS Connections	Low	7.5	-	### Summary The `server_hostname` TLS SNI check can be bypassed when an application reuses an existing TLS connection. ### Impact If an application does not properly handle TLS connections, it may be vulnerable to a man-in-the-middle attack.

MITRE ATT&CK® v15 Mapping

Technique density score: 0.0 · Techniques observed: 0 · Tactics covered: 0

MITRE ATT&CK techniques pending analyst enrichment. Deploy detection rules from Section 6 to identify related activity.

Threat Actor Intelligence

Attribution analysis across advisories in this report period.

CDB-UNATTR-CVE	1	-

Indicators of Compromise (IOCs)

IOC extraction for this advisory is pending enrichment pipeline completion. PRO subscribers receive real-time IOC push to SIEM/SOAR via the SENTINEL APEX webhook at: **GET /api/v1/intel/iocs?advisory={id}**. Full IOC packages include IPv4, domain, SHA256, and URL indicators with confidence scores, first-seen timestamps, and STIX 2.1 formatted bundles.

Incident Response Playbook

Phase 1 - 0-24 Hours (Containment)

1. Activate IR team; assign lead analyst and executive sponsor.
2. Isolate or WAF-shield aiohttp: TLS Server Hostname Override Is Ignored When Reusing HTTPS Connections instances exposed to the internet.

- 3. Enable verbose access logging on all aiohttp: TLS Server Hostname Override Is Ignored When Reusing HTTPS Connections endpoints immediately.
- 4. Pull last 72h of web server and application logs for forensic baselining.
- 5. Check SENTINEL APEX IOC feeds and SIEM alerts for exploitation hits in your environment.
- 6. Notify relevant internal stakeholders and legal / compliance team.

Phase 2 - 24-72 Hours (Eradication)

- 1. Apply vendor patch for aiohttp: TLS Server Hostname Override Is Ignored When Reusing HTTPS Connections or implement recommended mitigation.
- 2. Deploy Sigma and KQL detection rules from Section 6 across all SIEM platforms.
- 3. Rotate all API keys, service account credentials, and session tokens.
- 4. Conduct forensic timeline reconstruction for potential compromise window.
- 5. Validate patch deployment across 100% of affected instances via asset inventory.

Phase 3 - 7 Days (Recovery & Hardening)

- 1. Conduct post-incident review and update incident response runbooks.
- 2. Threat hunt for lateral movement or persistence artifacts using MITRE ATT&CK mapping.
- 3. Update asset inventory with patched version information and closure evidence.
- 4. Submit findings to internal risk register and CISO dashboard.
- 5. Schedule follow-up vulnerability scan to confirm remediation completeness.

Financial Impact Analysis (FAIR Model)

\$20K - \$180K Breach Cost Range (FAIR)	\$60K IBM Cost of Breach 2025 Median	\$25K/day Business Interruption Cost	N/A Regulatory Fine Exposure
---	--	--	--

Low severity findings require targeted patches. Aggregated low-severity debt compounds to medium breach probability within 12 months.

Remediation Cost Estimate: \$15K · Includes engineering time, IR retainer activation, forensic investigation, and customer notification costs.

Regulatory & Compliance Implications

Organizations processing this advisory must evaluate obligations under applicable regulatory frameworks. The table below maps this threat to relevant compliance requirements.

Framework	Reference	Obligation
ISO 27001:2022	A.8.8	Track and remediate within standard 90-day patch cycle

Framework	Reference	Obligation
NIST CSF 2.0	ID.RA	Include in regular vulnerability risk assessment

Actionable Recommendations

Prioritized defensive actions based on this period's intelligence.

1. Monitor aiohttp: TLS Server Hostname Override Is Ignored When Reusing HTTPS Connections for escalation.
2. Apply patches in next maintenance window.
3. Apply vendor patch for aiohttp: TLS Server Hostname Override Is Ignored When Reusing HTTPS Connections immediately - check NVD for official fix guidance.
4. Enable enhanced logging and alerting on all systems running affected software versions.
5. Deploy the Sigma detection rule from this report into your SIEM platform (Sentinel / Splunk / Elastic).
6. Audit all internet-facing instances of affected products and confirm patch deployment.
7. Conduct a threat hunt using MITRE ATT&CK techniques mapped in this advisory.
