Executive Summary

Impact All users of the `AuthorizeActionFilter` class are affected. The `AuthorizeActionFilter` simply does nothing, no “hacking” is needed to bypass the filter. ### Patches DotVVM 4.3.15, 4.2.11 and 5.0.0-preview09 fix this. ### Workarounds As a workaround, you can use the `AuthorizeAttribute` instead. It implements the same interfaces (correctly). Note that is it deprecated for unrelated reasons, feel free to suppress the warning when using it as action filter.
